

# What's In It For You: CQG's 3.0 Release of CQG Trader

CQG Trader version 3.0 is available for installation. You will be prompted to upgrade to this version when you log on. If you have questions about the new version, please contact CQG Customer Support at 1-800-525-1085.

## Features

### Keyboard Order Entry

Add an order entry field to the Order Ticket and type in your orders instead of using your mouse. Getting orders in as soon as possible is important if you're trading your own account and perhaps even more important when you're trading a customer account. On a busy desk, typing orders facilitates quick order entry.

## Enhancements

### DOM-Triggered Stop and Iceberg Orders added to Smart Order Types

Increase your trading efficiency by avoiding being stopped out of a trade when just a few contracts trade at your stop price. A Quantity-Triggered Stop (QTS) order is a stop order that is not triggered until the inside market bid/ask quantity falls below the QTS order's trigger level.

To limit market movement in response to a large order, create an iceberg order. An iceberg order is a limit day order that is shown on the book according to the display quantity you set rather than the total size of the order.

### Default Order Size Configuration

Define your own default order size. Knowing the default order size saves you from having to check it, and selecting the value yourself makes it less likely that you will have to change the quantity of the order before sending it.

This version of CQG Trader is compatible with Windows Vista™.
