CQG Introduces Premium Connectivity Option in Chicago, New York, and London

Denver, CO, March 9, 2009 – CQG has introduced CQG Direct, a new customer network offering ultra-low latency connectivity to its order routing and market data delivery systems. Clients can connect to the CQG Direct network in a number of global data centers selected for their proximity to major exchanges in Chicago, New York, and London.

CQG Direct is engineered to provide customers the fastest market data and order execution connections possible via local network access to CQG's market data and trading gateways. CQG also provides hosting services to clients who require fast connections but do not have presence in the data centers.

"As a vendor, we choose to operate in data centers with close exchange proximity. Our customers frequently seek out the same data centers, creating an opportunity to provide them with extremely efficient access to CQG data and DMA trading connections," said Rod Giffen, Global Head of Sales and Support at CQG.
