

CQG Trader System Specifications

January 2010 | Maximize your CQG experience

CQG Trader is the perfect execution platform for quickly viewing market activity, placing orders, and tracing orders and positions. To help you maximize your CQG experience, we provide both required and recommended system specifications for running CQG Trader.

Specifications

	Required	Recommended
Operating System	Windows® 7, Windows Vista, or Windows XP	
Processor	Intel® Pentium® 4 3.0 Ghz	Dual-Core. Intel Core™ 2 Duo (2.33 Ghz or better)
Memory	1GB RAM	2GB RAM
Hard Drive	7200RPM with at least 1GB of free hard disk space	7200RPM with at least 4GB of free hard disk space
Video Card	128Mb of memory (If multi-monitor, 128Mb per video card)	

System Setting Requirements

Hibernate and stand by modes cannot be used on a system running CQG Trader. Hard drive power-saving features should also be disabled. Windows 2000 is not supported.

Internet Access

CQG Trader requires Internet service via a high-speed connection, such as DSL, cable, or fixed wireless/wireless local loop (WLL). Wireless Internet connections are not recommended, especially broadband over a WiFi card. Dial-up is not supported. All network communications between CQG customers and servers are initiated from the client side. The destination port number at the server side is 2823, CQG's registered port number. CQG also uses a secure connection, port number 443, for authorization purposes.

Monitor Setups

These specifications are appropriate for single and dual monitor setups. If you have three or four monitors, you will need a higher performance processor, video card, and network connection.
