DMZ Trading Solutions Declared Approved CQG Certified API Partner

Denver, CO, August 10, 2010 – DMZ Trading Solutions, a Chicago-based trading software company, has connected its financial services software products to CQG, Inc.'s market data servers and Hosted Exchange Gateways via CQG's data and trading APIs, the companies announced today.

"We welcome DMZ Trading Solutions as our newest Certified API Partner," said Yuriy Shterk, Vice President of Product Development at CQG. "This partnership is a win-win for traders. It gives them access to DMZ's tools for automated trading and CQG's trade routing, including our low-latency, server-side spreader, plus market data and technical analysis tools."

DMZ Trading Solutions is the seventh company to connect to CQG's industry-leading API and hosting services through the Certified API Partner Program. DMZ Trading Solutions can now take advantage of CQG's ultra-low-latency market data and exchange connectivity offerings.

"Our partnership with CQG allows us to provide traders with a complete algorithmic trading solution," said David Widerhorn, Managing Partner at DMZ Trading Solutions. "In recent years, we have watched electronic markets move towards algorithmic trading. We believe that through our partnership with CQG, the long-standing industry leader in trade routing and technical analysis, our AlgoEngine software will provide traders with the tool they need to stay competitive."

DMZ's flagship software, AlgoEngine, allows traders to automatically execute trades using real-time signals from CQG conditions or trading systems combined with advanced user-defined, rule-based order management. With rule-based order management, traders can specify not only when they want to enter and exit a trade, but also exactly how orders should be worked in the market to minimize market impact, maximize profitability, and minimize slippage. AlgoEngine is flexible in that it can be configured for all types of strategies, risk portfolios, and traders ranging from local traders to large institutional clients. AlgoEngine offers state-of-the-art technology that allows traders to execute using advanced order types, such as randomized icebergs and market-if-touched hidden orders.

CQG's data and trading APIs are available as part of the company's flagship product, the CQG Integrated Client. CQG also provides direct connectivity to its Hosted Exchange Gateways using the industry-standard FIX protocol via CQG's FIX 4.2 API. By using CQG's API solutions, partners and customers can route orders directly to CQG's gateways through their own proprietary applications.

About CQG, Inc.

CQG, Inc. is the industry's highest-performing solution for integrated trade routing, global market data, and advanced technical analysis. CQG partners with more than forty

(continued)

Futures Commission Merchants and provides Direct Market Access to more than thirty-five exchanges through its worldwide network of collocated CQG Hosted Exchange Gateways. About DMZ

DMZ Trading Solutions is a Chicago-based software company aimed at traders seeking to gain an algorithmic edge in today's highly competitive markets. The software solutions DMZ provides are built from the trader's viewpoint and are low-latency, versatile and highly adaptable to today's ever-changing markets. DMZ understands the risks and capital outlay required to build a successful gray/black box-driven electronic trading operation. DMZ's goal is to allow any trader to experience the thrill of increased profits from algorithmic trading, at a small fraction of the normal cost, by interfacing with the tools and software traders already use, such as CQG.
