## **CQG Enables Trade Routing to Tokyo Stock Exchange**

Denver, CO, February 2, 2010 – CQG, Inc. now provides low-latency trade execution for derivatives traded on the Tokyo Stock Exchange (TSE). CQG, the industry-leading order execution, charting, and analytics provider for global electronically-traded futures markets, has been providing market data from TSE for more than a decade. Now, CQG's hosted trading gateway for TSE provides traders with fast Direct Market Access to one of the leading global exchanges.

"CQG is committed to continuing to build its network of Hosted Exchange Gateways," said Rod Giffen, CQG's Executive Vice President of Business Development. "The addition of TSE is an important element in our drive to provide trading access to exchanges worldwide."

CQG's trading connection to TSE is the latest addition to a growing list of exchanges to which CQG provides Direct Market Access. Recent additions include connection to the Australian Securities Exchange (ASE), ELX Futures (ELX), and the Russian Trading System (RTS) Stock Exchange. Future Direct Market Access is planned for the NASDAQ OMX Nordic Markets, the Mexican Derivatives Exchange (MexDer), and the Turkish Derivatives Exchange (TurkDex).

CQG's network of collocated Hosted Exchange Gateways provides low- and ultra-low-latency trading connectivity to more than thirty-five exchanges worldwide. Trading through CQG is extremely cost-effective and allows traders access to worldwide markets without any infrastructure investment, as CQG is responsible for the installation and maintenance of the gateway network and equipment.

The TSE connection is also enabled for the CQG Spreader, CQG's server-side spreader. With CQG Spreader, traders can execute both inter- and intra-exchange spread strategies.
