

## CQG Trend

New this month from CQG:

- New Data on CQG
- CQG Online Training
- *Trading Time* by Shaun Downey
- ICE Training Program

### Quick Tip

If the time scale of a chart has been adjusted, left-clicking on the red arrow beneath the chart on the right side of the window will bring the chart back to current time.

### New Data on CQG

- New products from NYMEX and ICE have been added and are available for trading. Please refer to the Symbol Guide at [www.CQG.com/Docs/Symbols.pdf](http://www.CQG.com/Docs/Symbols.pdf).
- As of June 1, DME contracts are available on the CQG Integrated Client and Gateway.

### CQG Training Available via WebEx

CQG now offers online training sessions covering charting, analytics, trading interfaces, and more. For the classes of your choice, visit [www.CQG.com/GettingStarted](http://www.CQG.com/GettingStarted).

### Trading Time by Shaun Downey

Shaun Downey has published a book on new methods in technical analysis. See the other side for a detailed description. To purchase a copy, visit [trading-time.com](http://trading-time.com) or email [websales@cqq.com](mailto:websales@cqq.com).

### ICE Training Program in New York

ICE will be hosting a summer-long training program to participants in the energy, agricultural, and financial trading community. Classes will cover the fundamentals of several electronic trading systems and highlight the latest product enhancements and functionality.

CQG product training is available at ICE's New York Trading Center on the following dates:

- June 13 - Basics of Technical Analysis
- June 27 - Advanced Analysis / CQG TradeFlow
- July 11 - Basics of Technical Analysis
- July 25 - Advanced Analysis / CQG TradeFlow

Classes begin at 3:00 PM daily and are available on a first-come, first-served basis free of charge. Registration is required in advance by sending an email to [nytradingcenter@theice.com](mailto:nytradingcenter@theice.com).

## Trading Time

A double meaning, referring to the allocation of the time to trade and understanding the critical information regarding where you are in time when a trade is placed. This facet of time has many characteristics:

- What time frame was used in the chart?
- How critical is the immediate price action directly after the trade is placed?
- At what point in time is the trade within the trend, or are we at the end of the trend?
- How strong is the trend based on the time it has existed?
- What is the risk and expectation in relationship to time?
- What is the dominant and correct time frame to be trading?

Obtaining a true measure of expectation in any one period of time is critical to improving the chances of success, providing a framework for the good trader and an understanding of risk and expectation to the new one.

This book looks at the characteristics of time in detail using proprietary studies that analyze time through referencing each part of the day in relationship to previous behavior. This creates a true measure of momentum, and as the studies are mostly based on the opening price, allows for fixed reference points that understand normal and unusual behavior in multiple time frames at the same time.

New studies such as Volatility Time Bands, Range Deviation Pivots, Time Average Bands, and Trade-Flow provide short-term day trading opportunities, giving exact support and resistances as low as the next 10 minutes. These can then be connected and

quantified with original methods and concepts using Steidlmayer's Market Profile.

The second half of the book looks at what is the correct time frame to be trading, what is the dominant time frame, and when a trend must move up a time frame to continue or die. This helps traders identify the beginnings of new trends when in their infancy and how to ride the trend to its conclusion sometimes many months later. This uses the proprietary studies of Stochastic and RSI Steps. This leads into advanced theories of quantifying divergence. The final chapter provides new concepts of swing theory, trailing stops, when trend corrections are due, and when the trend is strong.

The reader will learn new methods of quantifying swing patterns by connecting them with time, range, and volume via Hi Count / Lo Count.

## About the Author

Shaun Downey began his trading career at the age of 16 with Rudolf Wolff commodity brokers. After seven years, he went to work for Fulton Prebon to trade bonds and then joined Reuters to be part of the design and launch team of the Globex platform. He has spent the last 15 years as a technical analyst at CQG teaching, consulting, and promoting technical analysis around the world while writing daily and weekly commentaries on Foreign Exchange, Bonds, Oil, and Stock Index's spanning 45 markets.

*Trading and investment carry a high level of risk, and CQG, Inc. does not make any recommendations for buying or selling any financial instruments. We offer educational information on ways to use our sophisticated CQG trading tools, but it is up to our customers and other readers to make their own trading and investment decisions, or to consult with a registered investment advisor.*
