

CQG XData

Your data has more to tell you.

You've invested the time and energy to collect an abundance of specialized and proprietary data and then to format, import, and chart that data in a Microsoft Excel® spreadsheet or another format. Despite your efforts, your ability to analyze that data is limited, as charting is the extent of spreadsheet analytics capabilities. The lack of a robust analytics application prohibits you from maximizing the power of your data. CQG resolves this limitation, while minimizing your effort, with XData.

XData allows you to import your proprietary data into the CQG Integrated Client, where it is updated as frequently as you need.

XData Benefits

Robust

- XData encourages you to work with your data, allowing you to apply a variety of standard and custom studies and indicators to better expose behavior across markets, behavior which is vital in making trading decisions. With XData, you can access data on any CQG Chart within milliseconds next to other markets covered by CQG. You can also overlay XData on other CQG instruments.

Easy to Use

- Proprietary data is imported using any plain text file. Once the data has been imported, you can easily populate a chart by entering the XData name directly on the chart.

Low Maintenance

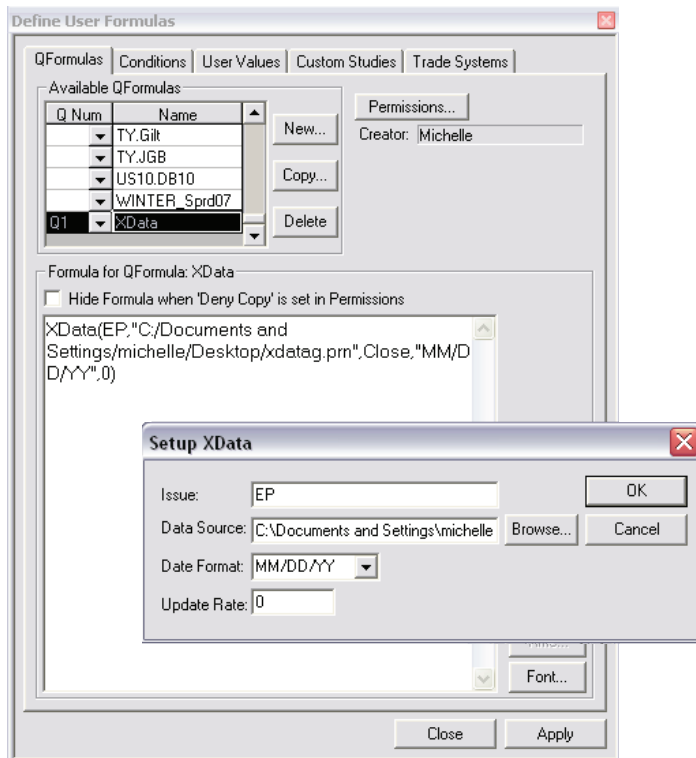

- XData requires only a one-time setup. Once you have established the data path, CQG retains that path. Traders can overlay XData to exchange-published data sets and see the relationship between their data and the broader market.

XData Tools and Studies

- Once imported, you can analyze XData using CQG's library of over 200 analytic tools and studies, including:
 - Fibonacci
 - Gann
 - Moving Average Convergence Divergence (MACD)
 - Trend
 - Trend Channel

XData Features

- Data is updated automatically on a configurable time basis as frequently as once a second.
- You can track data within milliseconds in the CQG Integrated Client.
- The integration of your data with other markets adds additional depth to your analytic capabilities.
- Proprietary data joins CQG data seamlessly, enabling you to use one application for data analysis without relinquishing control of your data and who can access it.
- XData also offers a snapshot ASCII file that is appended on an intraday basis.

Formulate studies specific to your trading needs.
